

Sprint 2 Report (2-22 to 3/24)

YouTube link of Sprint * Video (Make this video unlisted)

<https://youtu.be/2E1b6IBm9fI>

What's New (User Facing)

- Storing user connections
- Enter criteria section
- Basic recommendation feature
- Fix Logout Logic
- Fix Dashboard Sidebar Routing

Work Summary (Developer Facing)

This sprint we focused on getting an end-to-end prototype flow working reliably, starting with stabilizing the application foundation, including routing, authentication guards, fixing the logout behavior and then layering in the first real data workflow. We built the CSV uploading and parsing feature and connected it to a per-user storage model so uploaded connection data can be persisted and reused across sessions, then integrated that stored dataset into a simple recommendation/search experience driven by user-entered criteria. Along the way we ran into typical integration barriers around environment configuration and Firebase permissions/rules, and the biggest learning was how important it is to keep the UI flow modular so we can upgrade parsing and ranking logic in later sprints without rewriting the app.

Unfinished Work

We did not complete a deeper polish and algorithm improvements planned for this sprint, including a more refined UI/UX, expanded user settings/profile display, and a smarter search/recommendation approach beyond basic keyword matching. While the current recommendation feature works as a functional baseline, improvements like AI/ML-based query expansion, better synonym handling, and a more robust LinkedIn CSV parser were planned for completion for sprint 3 due to time and complexity.

Completed Issues/User Stories

Here are links to the issues that we completed in this sprint:

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/23>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/22>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/21>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/20>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/19>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/18>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/13>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/11>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/10>

Incomplete Issues/User Stories

Here are links to issues we worked on but did not complete in this sprint:

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/9>

- Not a priority feature for implementation, pushed back to sprint 3

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/8>

- Require more specification from client

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/issues/12>

- Require more specification from client

Code Files for Review

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/blob/main/PublicRoute.tsx>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/blob/main/App.tsx>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/blob/main/RecommenderScreen.tsx>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/blob/main/DashboardScreen.tsx>

<https://github.com/Tz-Ray/421-Network-Connection-Recommendation-Platform/blob/main/ConnectionsScreen.tsx>

Retrospective Summary

Here's what went well:

- Implementation of the core features including
 - Basic recommendations tab
 - Csv upload tab
 - User Authentication fix
 - Various bug fixes

Here's what we'd like to improve:

- Better UI implementation
- Refine user settings and display
- Refine searching algorithms
- Implement various UI algorithms

Here are changes we plan to implement in the next sprint:

- Add AI/ML searching algorithm to the current searching algorithm
- Refine csv parsing algorithm
- Refine user setting. Authentication and display
